

Burnett Medical Centre and Aesthetics **Anti-ageing fact sheet, V3 7 August 2020**

Anti-ageing Treatments

As we age, the body naturally produces less collagen which means our skin become less elastic. And after many years of facial expressions and sun damage, we start to see wrinkles, creases, and lines on our skin.

At Burnett Medical Centre we offer a range of anti-ageing and aesthetic treatments that include cosmetic anti-wrinkle injections and platelet-rich plasma therapy to enhance your skin and leave you feeling refreshed and radiant with a more youthful appearance.

All services are delivered by medically trained nurses and doctors in the comfort of our accredited medical clinic.

Cosmetic anti-wrinkle and anti-sweating injections

Cosmetic anti-wrinkle injection treatments work to soften the areas of your forehead, eyes and mouth that have permanent crease marks. The same injections can also be used in the underarms to prevent excess sweating.

We use leading anti-wrinkle products for the best treatment outcome for our patients and take a conservative approach so you will look refreshed and natural.

Anti-wrinkle injections work by relaxing the muscles that have contracted and form wrinkles, especially around the forehead and eyes. The injections into the top layers of skin

encourage the muscles to relax creating a more youthful appearance.

Anti-sweating injections block the nerve signals responsible for sweating, stopping the sweat glands from producing too much sweat. The injections are very shallow, meaning that the medicine is injected just below the surface of the skin, where it remains.

The results of our products take approximately three to seven days to take effect and last up to four months on average. Repeat treatments at regular intervals are recommended to increase this duration.

Cosmetic anti-wrinkle and anti-sweating pricing

One facial area	\$230
Two facial areas	\$390
Three facial areas <i>Crow's feet, horizontal lines and between eyebrows</i>	From \$540
Anti-sweating injections	From \$600

Platelet-rich plasma (PRP)

PRP therapy uses injections of a concentration of a patient's own platelets to accelerate the healing of damaged, ageing or diseased cells and tissues.

PRP can be used to restore hair loss for men and women and to stimulate collagen production and reduce fine lines in wrinkled skin.

PRP is relatively pain-free as numbing cream is applied to the area 30 minutes before your treatment. A small amount of blood is taken from the arm like a blood test.

This blood is then spun in a centrifuge to separate red blood cells from the plasma. Then the plasma is prepared and returned to the skin via a series of micro injections.

The plasma is rich in growth factors that repair damaged tissue. Patients can expect to see results in the weeks following their treatment as the complexion becomes nourished with the new collagen formed within skin cells.

You will look slightly sunburned for 48 hours and may have some minor bruising following the procedure. However, after several treatments over a three to six-month period, your refreshed appearance and reduction in fine lines will last many months and require only a few top ups per year.

PRP pricing

One treatment area <i>Eyes</i>	\$300
Two treatment areas <i>Neck and décolletage</i>	\$550
Three treatment areas <i>Eyes, face and décolletage</i>	\$750
Four treatment areas <i>Face and neck</i>	\$900
